

AN INITIAL  
CHECKLIST  
OF  
KENT LEPIDOPTERA

*Ian D Ferguson*

Version 1.0.0 April 2003

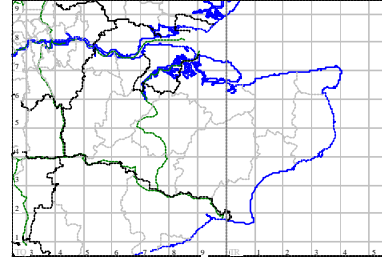

## INDEX TO FAMILIES

Family	Number of Species	Page
MICROPTERIGIDAE	5 species	1
ERIOCRANIIDAE	8 species	1
HEPIALIDAE	5 species	1
NEPTICULIDAE	82 species	1
OPOSTEGIDAE	2 species	2
TISCHERIIDAE	5 species	2
INCURVARIIDAE	24 species	2
HELIOZELIDAE	5 species	3
COSSIDAE	2 species	3
ZYGAENIDAE	6 species	3
LIMACODIAE	2 species	3
PSYCHIDAE	14 species	3
TINEIDAE	38 species	3
BUCCULATRICIDAE	11 species	4
DOUGLASIIDAE	1 species	4
ROESLERSTAMMIIDAE	1 species	4
GRACILLARIIDAE	81 species	4
SESIIDAE	11 species	6
CHOREUTIDAE	5 species	6
GLYPHIPTERIGIDAE	6 species	6
HELIODINIDAE	1 species	6
YPONOMEUTIDAE	67 species	6
LYONETIIDAE	6 species	7
COLEOPHORIDAE	95 species	7
ELACHISTIDAE	37 species	9
OECOPHORIDAE	72 species	10
ETHMIIDAE	4 species	11
GELECHIIDAE	123 species	11
AUTOSTICHIDAE	3 species	13
BLASTOBASIDAE	2 species	13
BATRACHEDRIDAE	2 species	13
MOMPHIDAE	13 species	13
COSMOPTERIGIDAE	15 species	13
SCYTHRIDIDAE	6 species	13
TORTRICIDAE	312 species	14
EPERMENIIDAE	6 species	18
SCHRECKENSTEINIIDAE	1 species	19
ALUCITIDAE	1 species	19
PYRALIDAE	167 species	19
PTEROPHORIDAE	32 species	21
HESPERIIDAE	6 species	22
PAPILIONIDAE	4 species	22
PIERIDAE	13 species	22
LYCAENIDAE	20 species	22
NYMPHALIDAE	37 species	23
LASIOCAMPIDAE	10 species	23
SATURNIIDAE	4 species	23
ENDROMIDAE	1 species	23
DREPANIDAE	15 species	24
GEOMETRIDAE	266 species	24
SPHINGIDAE	17 species	28
NOTODONTIDAE	23 species	28
THAUMETOPOEIDAE	2 species	29
LYMANTRIIDAE	10 species	29
ARCTIIDAE	30 species	29
CTENUCHIDAE	2 species	29
NOLIDAE	5 species	30
NOCTUIDAE	348 species	30

## KENT LEPIDOPTERA LIST

### Summary

This is an initial list of the moths and butterflies recorded from Kent. For these purposes, "Kent" comprises the Watsonian Vice Counties 15 (East Kent) and 16 (West Kent). The Vice Counties and administrative boundaries are illustrated opposite. The idea is to provide a checklist of all the moths ever recorded from our area as a basis for preparing a book. Nomenclature follows Bradley 2000. The list is still being checked but results so far are here made available.

### Accuracy

The data is PROVISIONAL, but probably over 97% correct. Readers should use the data with caution, as it is not necessarily yet complete nor fully checked. Overall the list is unlikely to vary materially and it is felt that it is worth making these initial results available sooner rather than later. The author would be most appreciative if any errors, especially omissions, could be notified. The underlying database is constantly being updated.

### Updates

Regular updates will be provided via the annual Kent Moth Reports. The intention is to post successive versions of this list as significant amendments occur on the Kent Branch Butterfly Conservation web site. The address is:

[www.kentmoths.org](http://www.kentmoths.org)

### Completeness

Some total figures have been published but no available checklist supports those figures. The totals are as follows:

Vice County	East Kent (VC15)	West Kent (VC16)	All Kent Total (VC15+16)
Micro-moths	1,069	1,071	Unknown
Butterflies	68	59	74
Macro-moths	665	589	Unknown
<b>Grand Total</b>	<b>1,802</b>	<b>1,719</b>	<b>Unknown</b>

By way of comparison, the same totals extracted from this list are as follows:

	East Kent (VC15)	West Kent (VC16)	All Kent Total
Micro-moths	1,172	1,089	1, 253
Butterflies	75	64	80
Macro-moths	720	654	748
<b>Grand Total</b>	<b>1,967</b>	<b>1,807</b>	<b>2,081</b>

The published data for macros came from *Leverton, R - Enjoying Moths, 2001* (Appendix 1) and gives E Philp as the source. For micros, the data was published by *Maitland Emmet* in the *Entomologists Record and Journal of Variation*, 112, pages 155 to 159. For butterflies, from MBGBI, Vol. 7(1), by counting. My listing includes species fraudulently and erroneously recorded from Kent.

### Analysis of Entries

	Subject/Symbol	✓	o	*	?	M	Total	-	Hash
<b>VC15</b>	Micros	<b>1,019</b>	142	5	6	-	<b>1,172</b>	81	1,253
	Butterflies	<b>51</b>	10	6	2	6	<b>75</b>	5	80
	Macros	<b>633</b>	68	10	9	-	<b>720</b>	28	748
<b>VC16</b>	Micros	<b>777</b>	304	4	4	-	<b>1,089</b>	164	1,253
	Butterflies	<b>38</b>	14	4	-	8	<b>64</b>	16	80
	Macros	<b>525</b>	105	17	7	-	<b>654</b>	94	748
<b>Kent</b>	Micros	<b>1,066</b>	174	6	7	-	<b>1,253</b>	-	1,253
	Butterflies	<b>54</b>	11	9	1	4	<b>79</b>	1	80
	Macros	<b>650</b>	68	16	14	-	<b>748</b>	-	748

## An Initial Checklist of Kent Lepidoptera

### Data Sources

The bulk of the data has been extracted from a selection of some 107,379 of the records on my database on Saturday 18th January 2003. Those records computerised by Dennis O’Keeffe (circa 45,000 but with some overlap to my own and including part of the Maidstone Museum dataset) have been used for the micros. There are additions – mainly of historical records - from other sources, mostly those listed in the brief history of Kent moth recording below. The purpose of including the latest date seen is to highlight the species we may be losing. The **Pale Shinning Brown** and **Small Pearl-bordered Fritillary** were both last seen in 1997. For micromoths, last date seen more often reflects the last date looked for.

### Status

In the main, it is national status given here as per Parsons 1984 for micros and Waring 1999 for macros. Occasionally used to highlight the Kentish aspect for a few species. Status is due for a review.

### Brief History of Moth Recording in Kent

In 1908 the **Victoria County History** (Page, W. – editor) was published. This is still the most up-to-date list of micros available, though woefully out of date on coverage, nomenclature and classification.

In 1909, the **Woolwich Survey** (Grinling, et al) covered the Woolwich and West Kent area. Tutt was involved with the Lepidoptera section (pages 333 to 420).

A number of local area lists have been produced, e.g. covering Ashford (1964), Dover (1949), Rochester (1913), etc. The quality of these was often variable and detail frequently lacking. Many can be traced via Chalmers-Hunt, 1989, **Local Lists of Lepidoptera**

The most important single source of historical data is Chalmers-Hunt, M - **The Butterflies and Moths of Kent**, 1960-81. This work was published in parts as a supplement to the Entomologists Record and Journal of Variation and, in consequence, is scarce and difficult to obtain. It covers the butterflies (Vol. 1) and macro-moth (Vols. 2 & 3) and summarises earlier publications.

Michael Chalmers-Hunt commenced compiling onto a card index the published records for Kent micro-lepidoptera with a view to completing the picture of our Lepidoptera. Ill health prevented him finalising this work. In 1990, Dennis O’Keeffe took over these records. He made splendid progress in checking out the older records and computerising some 45,000 records. His premature death in 2002 halted this work and left an enormous void.

**Maidstone Museum** holds a useful database on card index, mainly covering the period 1970 to 1992.

Unfortunately, some twenty percent of the species (usually the most common ones) are missing. There is no official record that their removal was authorised. For some species/groups it is known that the cards definitely existed at one time.

**The Moths and Butterflies of Great Britain and Ireland** (MBGBI) is a seminal work commenced in 1983 and still ongoing. It is intended to cover the entire GB Lepidoptera in ten volumes. The work includes distribution maps (mainly to Vice County for the micros and ten-km squares for the macros) and volumes (1-4, 7, 9 & 10) have been published so far.

1993 saw the printing of the excellent **The Larger Moths of the London Area** (Colin Plant, LNHS).

Updates have been published from time to time in **The London Naturalist**. Alas no companion volume on the micros is presently intended.

In 1998 in my capacity as Moth Officer for the Kent Branch of Butterfly Conservation, I started asking for records and have produced an annual **Kent Moth Report** for each year since. My total database, the main source of information used here, now comprises over 100,000 records, including those 20,000 or so remaining at Maidstone Museum.

### Key to Symbols

The symbols that have been used in the following listing are explained below:

- ✓ = I hold a post 1980 record for this species.
- o = Old record (pre-1980).
- ✕ = a record exists (usually published), but has not been accepted as a valid occurrence.
- ? = I have a record but confirmation required before acceptance.
- = No known record (indicates the entry has not been overlooked).
- M = Shown in the maps for Moths and Butterflies of Great Britain and Ireland.
